Calls promptly answered.

D. RICHARD WILLIAMS.

Hightown, Va.

Highland Co.

Will be at Huntersville, Va. at least twice a year.

M. F. GIESEY

Superintendent.

Marlinton, W. Va.

THE LIFE & TIMES Of a Medical Student.

As Explained by one of Their Number.

Dear Editor:—To everybody, sooner or later, there comes a decisive moment when their life-long avocation is determined. And to everyone, I presume, a time may be recalled when the question as to whether they will follow the footsteps of their parents or take up some other vocation, was fervently debated. Among the sterner sex is this question an important factor. The boyhood hours are generally spent in dreams of future prosperity and blissful anticipations fill the young heart with joy, but the permanent decision is generally reserved till the approach of manhood.

Well do I remember when in my youthful bloom my namesake Dr. P. D. Carter used to take me on his lap and call me the little doctor. Truly at that time I fancied myself a full fledged M. D., but not till the spring of 1892 did I decide to carry out the ambition of my childhood days. 'Twas at this time I went across the hills of my county a distance of fifteen miles to the office of Dr. P. D. McClintic, where I began for the first time in my life to peruse the many volumes of medical literature. It was very gratifying to me, after spending the summer with my preceptor, to know that I had advanced far enough in my work to enter medical college. So after consulting the different colleges, I decided to attend the Medical College of Virginia, at Richmond; but the thought of going so far from home as Richmond, was a theme of much meditation. And not only did the distance seem an almost unlimited journey, but the class of students I was to meet, about whom I had heard so many different tales, caused a sensation of fear that made my hair rise like quills upon the back of the fretful porcupine. But determined to make the best of every thing, I left home September 13, 1892, and traveled in an old road wagon over the mountains of West Virginia to Roanoke, a station on the C. & O. R. R., where I was to take the train for Richmond. At Roanoke, I was particularly interested in the railroad, as it was the first time I had ever seen a car line, and how to distinguish between the so-called freight and passenger trains was also to be decided. However, I soon found myself aboard the desired car, and speeding my way to Richmond.

I passed through Charlottesville, the home of the University of Virginia, and a noted medical centre, and found myself at Gordonsville, Va. where I was to change cars and take an entirely different route to Richmond. While awaiting the train at Gordonsville, my attention was called to the different lunch counters, in which my appetite felt tempted. I did not ask the price of anything but supposed by the kind looks of the dear old Aunt who had charge of the vendors, that the people of Virginia would be as generous and accommodating as the philanthropic inhabitants of old Pocahontas county. So I ordered according to my appetite and had the waiter bring me coffee and fried chicken. Everything seemed lovely until the bill was placed before me and it was then for the first time I realized that I was away from home and among a people foreign to me.

I returned home last Spring and expected to spend the summer recuperating and possibly do some practice. But as I had not yet completed my course at college, and the many superior advantages I could have around the hospital that could not be obtained at home, caused me to return to Baltimore this summer, where I am spending most of the time in study and practice.

sign in benevolence to those of my native clime. But the bill was paid and as my train was now awaiting me I immediately set out for Richmond, my destination. Arriving at Virginia's Capitol, I at once set out to find the medical college, which, as my preceptor had told me, was easily found by its peculiar odor. I met several of the students, who proved to be very clever gentlemen and after meeting the various professors and especially the dean, who relieved me a goodly portion of my money, I began my first year of attending lectures on medicine. I found the work quite difficult, but by close application I was successful in all my examinations at the end of the year.

Returning home in the Spring, I met with Dr. J. W. Price, a graduate of the Baltimore Medical College, of Baltimore, who told me of the superior advantages offered by the Baltimore college, and especially by the Baltimore Hospital, as it owned and had under its control the Maryland General Hospital, the State hospital of Maryland. He also informed me that a limited number of students attending the college were given the position of Resident Internes in the hospital, where they were given special instruction in all diseases, and were made familiar with all the afflictions by direct bedside instruction from the different professors. He advised me to make application for the Internship, and very kindly assisted me in securing this position. So I left home again and came to Baltimore, May 3, 1893, where I entered the Baltimore Medical College and Hospital. Not more than a dozen students can obtain this appointment, and the positions are always filled. The Internes are assigned in rotation to the various wards during the session and have all the advantages and varied experiences of the entire hospital. They acquire more practical experience in the hospital in one year than the most successful practitioner acquires in ten years in private practice. The advantages offered in the hospital are not only those we find in the general wards, but the college also owns and controls a Lying in Department, where the students are given practical instruction in obstetrical work. During the course last winter I was resident Internes in this department, while at the same time I also had the privileges of the general wards.

A word about our college will probably interest the medical minds of West Virginia, who are so sympathetic with this institution. Two years ago the faculty erected a new college building on the corner of Madison street and Linden avenue, which excels in appearance and equipment any other institution of its kind in the United States. It is built on the most modern style and its arrangements are all made to insure the best advantages. At present a new hospital, much larger and more recently constructed, is being finished. The standard required by the Baltimore Medical is higher than that of any other institution of its kind in the East and its advantages are excelled by no other college in America.

I returned home last Spring and expected to spend the summer recuperating and possibly do some practice. But as I had not yet completed my course at college, and the many superior advantages I could have around the hospital that could not be obtained at home, caused me to return to Baltimore this summer, where I am spending most of the time in study and practice.

lice. I hope to return again next Spring to the hills of Pocahontas county, not as a medical student, but as a competently authorized doctor of medicine.

During my stay in Richmond and Baltimore I have often found it convenient to visit at different times the many places of interest that approximate the two cities. Opposite the college building at Richmond was a colored Baptist church having a church roll of 8,000 members. I never visited the congregation, but mention the place because at times, especially during the revival services, the brethren became so intensely interesting that we could hear naught but their expressions of great consolation.

I often visited the old church where Patrick Henry uttered the memorable words to our forefathers: "I know not what course others may take, but as for me, give me liberty, or give me death." Down the James River a short distance is the grave of Powhatan, the famous Indian chief, with whom John Smith had so many dealings. The site of the old settlement at Jamestown is also near the old chief's grave. All these places round Richmond are venerable landmarks of the early settlers of Virginia.

Round about Baltimore, we do not find so many places of historic fame although Forts McHenry and Carroll which guard the city have their record on the pages of history. The most enjoyable recreation the medical student of Baltimore can participate in is to visit the famous resorts, Tolchester and Bay Ridge, which are situated on the beach about twenty five miles from the city.

Both these places are well known and abundantly patronized by the Baltimoreans. Pleasure steamers run daily and carry immense crowds from the smoky homes in the city to these resorts, which might well be called the fresh air camps of Maryland. I was recently presented a complimentary ticket to Tolchester, the most famous of the two resorts—where I spent half a day. Returning home, we were caught in a heavy storm which tossed the ship to and fro on the waves and caused a goodly number on board to become seasick. But one soon becomes accustomed to the rock of the ship and rather enjoys the motion.

Baltimore has been designated the city of fair women, but I am sorry to say the medical student rarely finds the time he desires to spend with the lovelier sex. I trust, however, that this title may prove attractive to the anticipating medical student of West Virginia, and that the Baltimore Medical College may have, in the future, a larger list of names from the Panhandle State entered on her long list of matriculants.

My very best wishes to all my friends in Pocahontas county.
Very truly yours,
PAGE D. BARLOW.

DENTISTRY. Dr. J. H. Weymouth will be at Eldray on the 6th of July and remain 4 days. Black eye, (Clark Kellmons) July 12th, 3 days. Mill Point, July 16th, 3 days and will be prepared to attend to all operations in dentistry. Call early and make your engagements, as his time is limited to the above dates.

The West Virginia Board of Pharmacy will hold the annual meeting at Berkeley Springs, July 10th 1894. O. P. BYRINGTON.

DR. NEWTON CRAIG.

The outlines of a sermon preached by Dr. Craig a native of this county, at Central Church, Atlanta, Georgia, is given below. The clipping is from the Atlanta Constitution.

His text was from Ephesians vi: 11:—"Put on the whole armor of God."

He began by explaining the context, which told what was the armor of God and why it should be put on—to withstand the attacks of the devil, and that the epistle was written to a church in a heathen and licentious community, reminding them of their former conditions and reminding them of their many temptations. Many do not believe in a personal devil, but the examination of our nature and history shows there is one. Certain it is that our first parents, tempted of Satan, fell from the high estate—by eating the forbidden fruit, and so "brought death into the world and all our woe." And in Job we read that when the sons of God assembled, that Satan was among them. And in the beginning of Christ's career, Satan tempted him. All Christ's work in the world is a warfare over Satan and a victory over Satan's work. Therefore it is necessary to put on the whole armor of God.

This is described in the terms of the various parts of the ancient armor. First, to have on the girdle of truth—the girdle was the first thing necessary to the old soldier to hold and confine his garments, and so in this world of darkness, on which all else depends. Next, the breastplate of righteousness, as the breastplate was needed to turn the arrows from the breast, so we need righteousness to turn from all temptations. Then the sandals of the gospel of peace, the spirit of peace learned of and obtained through the gospel cloth and protects as on our journey. The shield of faith. The shield was the most important part of defensive armor, as so is faith to the Christian a shield in every trial. Lastly, the sword of the spirit, God's holy word, which we can use to put to flight all adversaries as Christ used it to put to flight the great adversary.

DILLEY'S MILL.

Rev. C. M. Saver preached a very interesting sermon at Bethel from Luke 11:2.

Weddings seem to be the topic of the day, and our little town of Frost the most desirable place to be united in holy bonds of wedlock. Look out two more on the verge.

Some of our young people attended the sacramental services at Swaigo church.

Mrs. James Rider near Frost died the 15th inst. and was buried at Mt. Zion church. She will be very much missed in the community. "Yet again we hope to meet her," and our loss is her gain.

Misses Myrtle and Fannie Moore had quite a pleasant visit at Dunmore last week.

ANONYMOUS.

—FIND LAW.—"It shall not be lawful for any person to drink or destroy any of the fish in the creeks, streams or rivers in this State, by means of drug or other toxic, stinging, shooting, or other device (except hook and line, gill and spear), from the first day of April to the first day of December of each year. It shall not be lawful at any time to catch or destroy any of the fish in the creeks, streams or rivers of this State by any explosive, barbed wire, or traps."

SICILY, LAND OF HISTORIC VEN
DETTA AND RECENT RHO.

CATACOMBS AT PALERMO

There Archimedes discovered specific gravity, and his tomb is shown in Syracuse to students, who, like him, cry Eureka! Roman and Venetian Greek scholars, too, were attracted there. He who would have a souvenir of Sicily has only to look at the street fruit seller on the nearest corner, who will give him good-day in the Greek tongue, and offer him oranges that were lately plucked in Messina, which supplies half the world with fruit. Naturally harmless citizens, these people in a country they have inherited, speak the language of their forefathers, and still volcanic in the nature they inherited from fiery ancestors; ready to revenge with the knife the half understood badinage of the stranger, but quick to relent and to their own homes if unprovoked. Within a stone's throw of Detroit is a Sicilian citadel of a higher caste, who mean the Italian papers eagerly for the same reason.

Palermo, the capital city, the Golden Shell, is open on one side to the sea, and on the other three sides it has

The superstition that associates the horseshoe with good luck is very old. It is said to prevail not only among English speaking people, but in all regions of Europe and Asia. A tradition exists in all parts of the world that the horseshoe is of use from the medieval times, in which the horseshoes in made in various shapes. Some writers on this subject have assumed that the horseshoe superstition originated in the horseshoes worn about the necks of the ancient Romans. Others have assumed that the horseshoe superstition is of Jewish origin, and that the Jews were the first to wear horseshoes about their necks. It is known, however, that the Jews did not wear horseshoes about their necks. The horseshoe superstition is of Jewish origin, and that the Jews were the first to wear horseshoes about their necks. It is known, however, that the Jews did not wear horseshoes about their necks.

ONE CASE SHOULD INCLUDE—SITE OF SURFING AT POINT OF MOUNT VERN

The restaurants are very receptive to the American or European tourist at first, the exposed dead giving one a horrible sense of the emptiness of all worldly fame or pleasure. The bodies are stood up in rows, dressed as in life, and holding out a cold, with age, and taste of death. Glass eyes being substituted for real ones, which are, of course, never seen. Bodies are horrible. The taste of the damned used to know them in intervals to have killed, until the authorities intervened to remove the bodies, and find protection to the living people.

POCAHONTAS TIMES.

DEMOCRATIC TICKET.

For House of Delegates,
DR. J. P. MOGMAU,
Of Green Bank.

For County Commissioner,

For County Superintendent of Free
Schools.

D. L. BARLOW,
Of Edray.

THE name of Mr. M. G. Mathews was proposed last week in the convention for County Superintendent, and voted upon. It is due the gentleman to say that he was in no wise a candidate, and as this was well known in Edray district, the vote was not divided between Mr. Barlow and himself. Mr. Mathews was urged to run early in the campaign by many influential friends, but refused. His nomination was ill-advised.

It has been said that the democracy of Pocahontas is "hopelessly divided." Let no one congratulate himself on that false assumption. As far as a nominee for county commissioner is concerned so far is the party divided. The selection of county officials is not a matter of politics, the best man is to be chosen, only an ancient precedent has been set in this county, that the best man was always to be found in the democratic party. A whisper in your ear will tell you what that "hopelessly divided" party will do in November. It will send a democratic member to the legislature; it will elect a democratic senator from this district; it will be necessary to elect a democratic congressman. Cut off a few such counties and the party would be lost.

THE Congressional candidates of this district are Mr. Alderson, Judge McLaughlin, Editor H. Clay England and Hon. Jno. A. Preston. True vote in this county stands by the division at the convention, two-thirds for Alderson and one-third for Preston. While Mr. Preston is one of West Virginia's noblest sons, and probably a future congressman, he is not, in our estimation, the man who can deliver us from the painful ordeal of seeing this district send a Republican member to Congress. Mr. Alderson is the great canvasser who tears down the walls of opposition and wins men in spite of themselves. He has had no opportunity to fight for the nomination against brother democrats, and indeed it is not likely that he wishes to make two fights to retain his seat. But with the nomination, he will come into the field to win, and win he will.

Outing Party

A party composed of the following ladies and gentlemen went to take a view of Hill's Creek falls, last Saturday: Miss Bell and Maud Eskridge, Alice and Vidie Clark, Lucy and Lillie Smith, Mattie Curry, Kate Clark, Ida Bruffey, and Messrs. Albert Overholt, Willie Hill, Chas. Keshner, Walter Clark, Colbert Kinsman, Jennie Curry, Martin Smith, J. W. Dever, Prof. Miller, and Willie Hogenst.

An early start was made on our way by over rough mountain road and was up hill most of the way, but the day was a beautiful one and we started light hearted and gay. The first falls we reached where the water rushed over a precipice sixty feet high into a bubbling cove. We visited the second and third falls.

About one o'clock the well filled baskets were opened a fine lunch was spread on a large flat rock, which was shaded by tall ferns. The interesting branches and foliage making it a complete summer house. Mr. Dever made several photographs of the party as they stood near the falls.

The scenery along our route was superb. The rushing water, the towering peaks, the various kinds of the most beautiful wild flowers, simply baffled description.

One young man left home a Monday

and returned a Baptist. He immersed himself in one of the deepest places in Hill's Creek. We reached Hillsboro about 8 p. m. tired but well pleased with the trip.

PHILLIS.

Pocahontas Boys at School.

Dr. J. M. Barnett, who has started a successful practice at Post, obtained his degree at the Baltimore Medical College this year.

Mr. Page D. Barlow, of Edray, is at the same school, preparing him self for the practice of medicine.

Mr. Lucy Sydenstricker, of Academy, has brought back the degree of A. B. from Hamden Sydenstr.

Mr. Wm. Wysoong, of Academy, has passed successful examinations in that college.

Mr. Frank Hill, of Academy, has finished his first year at Randolph Macon.

Mr. J. A. McLaughlin, of Marlinton, took the degree of M. A. at the Denmore Business College.

Messrs. Summers McNeil and Winters McNeil, of Mill Point, have completed their first year at the Washington and Lee.

Mr. Walter Anderson, of Lobe-
lia, is one of the leading men at Emory and Henry college.

GREEN BANK.

We are having fine weather at this time. Corn is growing firm, but very short for this time of year. Wheat is good and harvest getting close. Oats promise fine, but the meadows will be light in this section of country.

Mr. W. T. McClintic, Beverly, W. Va., was among his many friends at this place last Sunday, and returned the first of the week.

Mr. Lee Gum and family, Davis, W. Va., are visiting relatives and friends in this vicinity.

Little Mamie, daughter of Mr. and Mrs. Ellis Curry, is ill with diphtheria.

Mr. and Mrs. Benjamin Arbogast are on the sick list.

Mrs. W. H. Hull can walk about the house. She went as far as the store on last Monday.

Mr. Charley Arbogast and Miss Hughes will be married on the 26th or 27th inst. at the home of the bride, Mr. James Hughes.

Rev. C. L. Potter preached a very good sermon at this place last Sunday to a large congregation.

There is being a move in the right direction made at this place, and that is to get a singing class organized and a competent teacher to instruct.

DUNMORE.

Hot and fine growing weather. Grain crops look well at this time, except corn, which is short. There will be some fruit in our neighborhood and a full crop of potato bugs.

Our people on the sick list are improving, except Mrs. Lula Kerr. Mrs. Wm. McLaughlin is improving under the skillful treatment of Dr. Jno. Ligon.

Mr. Jos. Loury, Jr., and Miss Lucy Kincaid spent over Sunday in our town.

Charley Barlow, the Backhannon grocery drummer, was in town last week.

Quite a crowd of Staunton, Va., sportsmen passed through town Saturday on their way home.

Mr. Peter Lightner and Mr. Matheny, of Highland county, Va., who have been out on a visit, returned Saturday.

We had the pleasure to attend the basket meeting at Mt. Zion Church Sunday, 25th. We listened to two very fine and interesting sermons, one by Rev. E. R. Little, P. E., and the other by Rev. Charley Felts, who struck the key note when he told the living that they should care a little more for the dead, and that is to favor up the graveyard, that is in the woods, and cut the brush, so the graves of the dead may be found. There are but few of us who have not fathers, mothers, sisters, brothers, wives and husbands who lie beneath the clouds of the valley; and it looks hard and rough to see their graves run over by horses, cattle, sheep and hogs. This matter, and fixing up of churches, should be looked after more than it is, and everybody should lend a helping hand to this important matter.

The next big basket meeting will be held the first Sunday in August, near Robert Shrader's, in the hills, conducted by Revs. G. F. Moore, C.

Felts, and others. A good time and a large crowd is expected.

Messrs. E. C. Shrader and J. A. Noel are off for Staunton this week.

Mr. Jim Sheets, of Williams' river, was in town for a load of furniture. Jim knows where to come for the best furniture in the county.

Mr. Frank Arbogast and Worth Nottingham got badly done up last week by their horse running off near Marlinton.

We must say that Mr. Amos Dilley has done more work on the road between Dilley's Mill and McCutchan this summer than has been done for years, and the road is in better condition than we have ever seen it; and we must say that part of the road between Dilley's Mill and Huntersville is in a worse condition than ever seen before. There are mud holes axle deep.

Miss Rosa Ligon has returned home from a visit to Basic City, Va. Jefferson Gonlette was up last week for some good furniture.

Mrs. Jacob K. Taylor and son Jake have returned from a visit to Highland county.

Rev. Squire John A. Taylor has located at Ronceverte.

For sale by BARLOW & MOORE, Edray.

HOME NEWS

The president of France has been assassinated by an Italian. He was stabbed while in his carriage on the street.

If you want pictures in all the latest sizes and styles, you should come to Marlinton.

Don't forget that J. W. Bever, photographer, will remain in Marlinton only a few weeks longer.

Notice. All persons having watches with Mr. M. D. Smyth, jeweler, will call and get them by July 4th, 1894, as he will then leave the town.

Yes, J. W. Bever, photographer, will be in Marlinton on the 4th. You should give him a call if you want fine photos.

The U. S. McNeill assignment, at this stage of the proceedings, would pay about fourteen cents on the dollar to creditors at large if a disbursement was made. There was no decree of importance entered in this case at last term of the court, as was the case in the E. I. Holt matter.

D. H. Garber, while in a sonam ballist state, Monday night, walked out of the second story window of his residence, on Third street, and didn't "wake up" until he struck the sidewalk beneath. Beyond a general shaking up, Mr. Garber was only slightly injured.—*Elkins News.*

Ed. Jack, a son of Obadiah Jack Esq., of Elk, had the misfortune to have his kneecap cut in two with an axe in the hands of another person. Drs. Cameron and Price performed the delicate operation of sewing up the wound.

A thunder storm of most unusual violence passed over the lower portion of this county, accompanied by hail, on Monday. Wheat was lodged and meadows flooded. Benick's Valley in Greenbrier county had probably the heaviest visitation.

At court quite a number were made sick by the "Marlinton water" and took some pains to find out how they were affected. The symptoms are wakefulness, hilarity, and an inability to pull the boots off, followed by a short sound sleep. On waking the patient is troubled by a sore throat and a big head. Feels all torn up. He seeks a moderate amount of Marlinton water, costing seventy-five cents per pint, and drives away that tired feeling.

The weather has been exceptionally hot for sometime. The thermometer reached 90° on Sunday, and many a man broke the Sabbath into bits by bathing. The man in town wishes he were in Marlinton, and the Marlinton man wants to go to Cranberry, or some other cool place, while the citizen of Cranberry probably finds himself up a tree as he has no nice cool retreat for the hot weather.

The two cases against Dr. J. B. Lockridge in the Supreme court, were recently decided in his favor, and the action of the circuit court affirmed. The bill was drawn to set aside a fraudulent conveyance of land to the first place. While the suit was pending the land was recovered.

The weather has been doing everything for the farmer. Corn has been growing wonderfully and oats, meadows, and gardens look very thrifty. Wheat is being cut this week, and the crop will be very much above the average, as reports say that it is well filled. Everything in the stock line is fed. Sheep are sold at the top as far as money is concerned, but the other stock of these farms who have stocked their farms with sheep, is very much poorer, as a rule, than that of other farmers.

Mr. E. H. Smith is the proud possessor of a fine Record bicycle. Mr. Charles Steinmeyer has also invested in a wheel of the Excelsior brand. Eight miles an hour can be easily made on long trips over our roads.

Mr. Joe Gay, of Elk, has had in captivity for more than a year a large eagle. It is still most ferocious. It has never taken any water. It subsists as long as three weeks without food, as it will only eat meat which has been freshly killed. This would seem to dispute the theory that all eagles eat carrion.

The Staunton Fishing Club encamped this week at the mouth of Knapp's Creek at this place. The following gentlemen compose the party: Capt. James Bumgardner, Messrs. R. P. Bell, Charles L. Cook, F. B. Webb, Fitz Elder, and Geo. Beall. They have the assistance of some cooks, etc. There has been no perceptible diminution of bass in the river, though they have had fair sport no doubt.

Last Sunday morning a worthy citizen of this village arose early and sought his faithful cow. The cow was an intelligent animal and hinted to her master that it was no use to drive her home, by refusing to come. However, when she was brought in it was discovered that she had been milked dry. The owner of the cow was annoyed and blamed some of the numerous camping parties with having milked his cow.

Mr. Norman B. Price has added to his collection the stone pipe recently found on Clover Creek by Mr. Henry Waugh. It is a perfect specimen and one that can be smoked yet. The greatest trouble would be that it would get too hot to hold. On the outside is a leaf delicately traced, and eighteen well-defined marks. Opinion is divided as to whether it is a record of scalps taken, or a sort of family register. There is, too, may be only a rapid calculator for a business Indian as they are arranged in groups of three. Anyone having relics to dispose of at a reasonable price would do well to write to this office.

The public school at this place is a matter under consideration now. There are two school houses here not more than three quarters of a mile apart. The question is narrowed down as to whether we shall have two failures or one success in the matter of schools. The new building has two large and well lighted rooms in which a graded school can be kept, and by this means we may have a school of six or eight months at least.

The blank "Liar's Licenses" recently distributed throughout the county, were printed at this office. Various "licensed liars" have sent their certificates back to this office to the editor of this paper accusing him of having so insulted them. Among others was one from a most respectable lady. We wish it understood that we have had no part in the joke, have not approved of it, and when we were duly licensed we swelled with indignation.

A good many have been studying the life and habits of the bass. Mr. N. C. McNeill has noticed that a very large bass often allows himself to be landed without making the resistance of a much smaller fish, and says that the bass acts as though it were mad at being taken for a "sucker," and when on land will make a fight that would whip two dogs. Mr. C. Z. Haver keeps his eyes open, too. He saw a big fledged pigeon flatter from its home underneath the Greenbrier bridge, and being too young to fly, fell into the water. As he was pushing off in his boat with the humane intention of saving its life, he saw it swallowed bodily by a large bass.

Christmas Eve. The weather was very cold, and the snow was falling fast.

Rev. Wilbur McNaught will preach at Marlinton next Sabbath at 11 o'clock, and at Hamlin Chapel at 4 in the afternoon. Rev. Price will meet his appointments at Poage's Lane and Clover Creek, in exchange.

PERSONAL.

Rev. D. S. Hydenstricker was in Marlinton last week.

Attorney Sam'l. V. Woods and Harry S. Byer, of Philippi, attended court.

Judge Campbell was taken suddenly ill last Friday while here holding court.

Mr. Oscar Slavin, of Vine Creek, Kanawha, is visiting his sisters, Mrs. S. L. Brown and Mrs. L. M. McClintic.

Dr. Arlie Jones, of Doe Hill, Highland county, graduated in medicine at the University of Virginia.

Mr. Jas. L. Sheets called at this office last week and contributed.

Mr. W. P. Hutcheson, of Clifton Forge, has taken up his residence in Marlinton. He is a veteran printer and has cast his lot with this paper.

Mr. P. Goldin is in Baltimore buying goods for his new store at Marlinton.

Mr. A. Lawson and Mr. A. Hazelrigg, of the English colony at Mingo, were in Marlinton this week.

Professional Law.

Last week a case in our circuit court, of utmost importance involving title to land on Douthard's Creek, valued at the lowest estimate at \$20,000, was disposed of. It was the only business of special importance due at this court outside of the criminal docket. The action was one of ejectment brought by the St. Lawrence, Boom & Manufacturing Company, represented by Major Harris, of Lewisburg, and Mr. Mallohan, of Charleston, against Mathews and Holt, defended by Mr. C. P. Jones, of Highland, and Col. B. S. Turk, of Staunton. It has been twice in the Supreme Court of Appeals of this State and was destined to go before that court again in any event.

It was understood therefore that the trial by jury was to be merely on the giving or refusing of a certain instruction by Judge Campbell. The jurymen not being familiar with the law, did not understand that they did not have to pass on the case, and so listened the whole afternoon to the argument meant for the ears of the learned judge in a most comical endeavor to understand some of the deepest and most abstruse problems of law, as stated by the four attorneys, who argued the case. After the adjournment they admitted themselves to be more in the dark than ever.

Considerable speculation as to the result was indulged in by the other members of the bar and the rest of the court assembled at the usual hour the next morning, and waited the coming of the judge. It was somewhat delayed, as most voluminous records had been submitted to him to read. While waiting, Mr. John Oatburg, of Monroe, in his original way, came in, assumed the judge's chair, opened court, and proceeded to hand down the opinion all were waiting for. After stating the case very clearly, he said that he had decided to leave the matter to a toss-up, and having said that, he decided in favor of the St. Lawrence company.

Judge Campbell came in soon after, and delivered a most comprehensive opinion of the knotty question, and decided in favor of the St. Lawrence company. The order entered allowed, in reference to Judge Snyder, one of the richest men in West Virginia, no damages, the sum of one cent. It may be a damaged case when he gets it, too. When we next hear of the famous case it will be in the Supreme Court.

Preliminary Hearing.

State vs. Sherman Buzzard had a preliminary hearing before Squire Groce at Huntersville, last Tuesday. With Mr. L. McClintic representing the State and Mr. Backer for the defense. The charge was that of setting fire to the woods near Frost. The defendant escaped when first arrested, and gave as his reason for taking his leave that he was afraid of false swearing. The defendant was bound over to appear before the grand jury in the sum of \$500. Mr. Buzzard is the witness who testified in court last spring that the prosecuting witness in the present case, who was on trial then for assault and battery, had knocked him *compos mentis*.

Dr. Richard Williams

Last Monday night Dr. Richard Williams died, aged sixty years, at hotel Marlinton of gastro enteritis. He was a physician of the Thompkins school, and was considered very skillful by many. He was a native born Irishman, and had seen service in the Crimean war. He married Miss Hannah Sharp, of Edinburg. Four children of that marriage survive him. Whatever faults he had were those from which no one suffered but himself, and withal he was a warm hearted and generous man.

Died.

At Charlottesville, Va., Miss Anna Beard, daughter of Mr. Wallace Beard, aged 20 years, of typhoid fever. This young lady was attending school at the seminary conducted by Prof. Young, and was taken sick about the close of the school. Miss Grace Clark, her cousin and one of her teachers, nursed her devotedly until she died. The kindest attention and the skillful supervision of the best physicians did not avail, and a bright life full of promise and hope was thus cut short by this dread disease. The remains were brought to her home at Academy and interred last Sunday morning. Thus ended the life of one who had endeared herself to all associates.

Something Like Stonewall Jackson's Experience.

Last week there was a West Point cadet in Staunton commencing his soldier life very much like Stonewall Jackson did. He was a fine looking young country boy, good face, frank manner and shrewd mind. It was Robert D. Kerr, of Green Bank, Pocahontas county, W. Va. He had just won the cadetship at West Point in a competitive examination at Hinton, and had stopped here to see Hampton Wayt, who he had gotten acquainted with while young Wayt was on a fishing excursion near his home. The boy had only been to a country school, but he was strong mathematics and it had stood him in good stead twice. A railroad surveying corps was in his neighborhood, and he applied for work with them. On questioning him, the chief engineer found he was a remarkable mathematician and engaged him. After the corps left, the youngster went back to farming again. He said he had picked up a paper in which it was stated that there was to be a competitive examination for the cadetship at Hinton, and he just thought he would go down and try it. He had won over several competitors. Had he any baggage, his friend Wayt, asked? Oh no, he had brought no baggage; there was no necessity for it; they give you your clothes at West Point. He was advised not to go straight to West Point, but to stop and see his Congressman, Mr. Alderson at Washington, and we see from the official announcement of his appointment that he did so and by this time he is at West Point. He is the sort of independent American boy that will make a good soldier, or good anything else that he puts his hand to. The boys perfect confidence in himself, and the way in which he got the appointment brought to mind very recently the way Stonewall Jackson in youth got his entrance into a profession that made his name immortal.—*Shenandoah Valleyist.*

For Sale. We are selling the State Bank building, situated on the corner of the Union, August, 1894.

KING COUNTY'S

[illegible]

the average was 1.00 cent, and decreasing to 0.60 cent in 1960. From 1950 to 1960, a broad range of conditions within, personal, and international, as well as profitable and unprofitable, was reflected in the disposition of the supply of the metal. The market's efforts were more and more an indication of the influence of industrial interests. Beginning with 1940 there came a period of extremely low prices and the Russian States showed very much from this decline. In the year the average New York price dropped to what was then the lowest price from the preceding year, and this was followed by a continuous decline until 1949, when the average was 0.50 cents, the lowest average ever known to the nation traded in 1940-49, when an enormous surplus of metal following the devaluation of the dollar, and the consequent demand for metal, in what was called the lowest point on record, the average at New York was 7.50 cents, or nearly five times higher than in 1949. Moreover, in 1949 the metal was without value, while in 1950-49 the metal of steel added almost a new period of high prices, and the average was 1.00 cent, or nearly double the average in 1949. In 1949, the metal was short and prices advanced sharply, only to drop back to eight and then to seven, and one-fourth cents, making the average for the decade, from 1949 to 1959, the lowest ever known in the

After giving in detail the statistics of production, consumption and prices for each year since 1940, the *Massachusetts* Second says:

A study of the foregoing figures will show that seven years of unexampled increasing output, as from 1940-46, has been followed by a period in the history of trade. It is doubtful if any leading crop raised can show such an unbroken increase for seven years. Atopping from 1,700,000 bushels in 1940 to 4,700,000 bushels in 1946-48, there was a drop to 3,000,000 in 1949-50, and then a two-year recovery, so that we are presently at 3,800,000 bushels in 1951-52, a gain of 1,500,000 bushels, or nearly sixty per cent. advance, in seven years. It ought not to have been expected that consumption would keep pace with such a rise in production, or that we would have no surplus but shortages. This will help to reduce the confusion which has been overweighed the market for seven years. With surplus stocks worked off, a new start can be made, and the country can begin to consume surplus wheat. The world will then be on a normal basis for higher prices, because consumption will then have outstripped production.

[illegible]

From 1945 to 1949 the average price in New York was eight cents per pound, a lower average but also prices that may range from three to eleven cents (1945-49).

The importance of cotton to the foreign trade relations has been emphasized from the single statement: "The cotton trade is one of the most important in the world." It is estimated that the United States exports to the rest of the world \$2,000,000,000 of cotton annually, and that the rest of the world imports from the United States \$1,000,000,000 of cotton annually.

The work is a commercial institution in Baltimore. Its former name was given more toward the future, and the people who were under their protection paid them for the use of their. Unfortunately they were caused by the economy, in which persons were made. They still think to-day, and are to see the full is furnished by those of the economy, and a direct cause the error. And, and the Island which has been approved by them in the institution. Finally in Maryland in the state to be seen.

National Vapor Distillate.
Great distillates have been found in several of the States, and some of them are being used for the production of alcohol and kerosene. It is said that the distillates from the States of California, Texas, and Oklahoma are being used for the production of alcohol and kerosene. The distillates from the States of California, Texas, and Oklahoma are being used for the production of alcohol and kerosene.

any kind of insecticide, whether in the form of a spray or otherwise, will not be very slowly in the soil and its best way to use it is as a mulch about your grape vines. If sprayed over the surface to the depth of two or three inches it will keep the soil unharmed, moist and cool, and at the same time prevent the weeds from getting a start. If you spray the foliage of the vines it will be carried down to the roots by rain, and nothing will be lost by using such means except as a loss of money for plants. If sprayed over your garden, and allowed to be washed off by heavy rain, the weather will drive away most of the insecticide, and the working of your plants the larger crops are likely to become somewhat troublesome. —The Earth News.

In England and Scotland it is an almost universal practice to feed draught milks a daily ration of raw milk, generally warm from the cow. Flaxseed, fully and crushed oats are sometimes added, but the mixture is usually discarded before feeding. As night is expected, milked in the with which they pump from their breasts' ration and the mother milk made as cows grows, often fully 1000 pounds at eight months old.

[illegible]

It is built up a run down construction in a salt-affected place, the place of milk, but it should be well situated and be in moderation. Two or three years three times a day is enough. *Page 60 off the head gradually.* It will cannot be dropped suddenly with out injury to the milk. It should never be used to get rid of it as a ready supply, and more for that reason, would have supplied the need with a large number of milk needed much milk. — New England Farmer.

The New Hampshire Experiment Station has conducted some experiments as to the effects of different breeds upon the hardness of butter, although the work in this direction is not as yet extensive enough to permit the drawing of conclusions. Their experiments thus far indicate that the Jersey cow tends to produce a more butter quality of, better than any other breed, and especially more, and other things being equal tends to insure the creamability of the butter fat. The work the same over the hardiness

of the food chain upon the marine environment. That ecological problems are much more serious than have gone by, but it is also favorable to the future success of the better products that the fishermen will have a well-developed fishery after the de-oiling and quality of the bottom has, and in a single trial apparently revealed the general truth that the relatively little while decreases in the period of lactation, whereas the continuous need tends to produce a reasonably hard quality of bottom and that continuous work and glutted fish might be used together with

differs in other ways that contribute to growing behind the building panel of insulation. It is not a good index of the commercial hardness of leather. That will be gauged by a soft leather tester at a lower temperature than a hard leather tester. An definite relation between building panel and actual hardness tests in leather can be traced through tests and results. Both with respect to the use of data tests, they reveal hardness and relation with tests in leather. Because a quality leather will remain with decreasing in the amount of moisture content. That is, the leather will become harder.

the flower cannot be cut, but that it is to remain why the head should not be in flower. It is better for the head if the flower is allowed to remain on it. It helps to put life in the soil and so be pastured as well when the head is in a rough condition as when smooth. The cost of seed is a mere trifles. The head will do for eight weeks, and will

[illegible]

Shoes in the winter season are required to discharge a double duty—afford foothold as well as to give against road wear. William Dickson, in the United States Government report on the horse, says on the subject: "Various patterns of shoes have from time to time been invented to meet this dual requirement; but the most successful have been those of hard and soft soles or walking, in fact, though it be, probably, all things considered, the one which best suits the requirement of the shoe. It should, however, never be lost sight of the the shorter, the sharper and the more the sole, so long as they are

High salinity, while they confer a firmer foothold, also present some of the conflicting impacts both on the fish and on the experimentalist's tank setup. It is only from that position of view that the hatch which enters the ground surface that the home derives any benefit in the shape of foothold, and it is more apparent in the momentary capacity that any salinity which is not present in the tank, where ground is necessary to prevent the animals from escaping to enable it not caught in the

I have had particular stress on this subject, as I am of the opinion that the presence of the parasite disease is a deadly foe, which horses need for agricultural labor should enjoy practical immunity. It is a terrible scourge, is the heaviest one during our long winter months of steadily large scale, only tropical parts of what I call judgment in the north or in during process.

I will explain what I mean. When a horse is dead with the congestion follows to attack the lungs and the

and head lights are, or might be, in, the same plane to start with, at all times. Very often, however, they are not, and even when they are the two sets may differ in attitude need for straight-up projection the two rapidly take on features of the head. The result is that the head is depressed while the head is smaller still, as shown.

The relative position of the heavy structures within the head is altered, and the posterior base, which is not one of the weight-bearing bones, is brought within the angle of inclination of both weight and compression, as
